Prof. dr. ir. G.A.M. van Kuik

Delft University Wind Energy Research Institute DUWIND

Gijs van Kuik received his university degree in 1976, at the Delft University of Technology, faculty of Aerospace Engineering, with specialization on theoretical aerodynamics.

Employed by Stork Product Engineering in 1988, prof. Van Kuik was involved in technology development and design of wind turbines for all Dutch and some European manufacturers. He also contributed to the formulation of national and international R&D programs, and the development of standards.

From 2000, he is the scientific director of the newly established Delft University Wind Energy Research Institute DUWIND. DUWIND research focuses on large-scale application of offshore wind energy, and includes almost all technology aspects. The R&D programme is executed in close co-operation with the unit wind energy of ECN, Energy research Centre of the Netherlands.
